

CA Connectors / CA Connector Service

Introduction

1. CA Connectors

CA Connectors allow the true-Xtender Registration Authority and true-Xtender Autoenroll PKI to integrate with different types of Certificate Authorities.

CACConnector Service can be used to run CA Connectors on another system (e.g. in another domain) than the consuming application (true-Xtender Registration Authority and true-Xtender Autoenroll PKI)

For installation and configuration refer to the Registration Authority or Autoenroll PKI installation guide.
