

Product documentation

Structure

Each product documentation is structured in the same manner to allow for quick retrieval of information. Here is an example of the **Autoenroll PKI** documentation page:

Introduction This document describes the administration and configuration tasks for true-Xtender...

1. Introduction

The introduction is one of the publicly accessible pages and aims to showcase features of the product.

2. Releases

The releases chapter contains a number of releases structured as pages. Each page title contains the product version. The page contains the release notes for this version and downloadable attachments like software releases, SBOMs and more.

3. Guides and Manuals

Much like releases, guides and manuals are also contained in chapters as versioned pages. A page with a version in the name can also have different revisions.

- The title version indicates to which software release the page belongs to.
- The page revision represents the current state of this page for this particular software version. It might increase when mistakes in the documentation are fixed.
